Education

The University of Edinburgh — **Edinburgh, United Kingdom**
BSc with Honours in Mathematics — *Sep 2010 - Jun 2016*

Experience

Alvarez & Marsal — **Seoul, South Korea**
Data Scientist — *Oct 2025 - Present*

- Developed an end-to-end AI-enabled Market Intelligence platform integrating macroeconomic, trade, and supply-chain signals through EDA, data analysis, and predictive modeling frameworks.
- Built scalable AI Agent solutions to support proposal generation, consulting workflows, and operational efficiency initiatives within the Digital team.
- Conducted data science research and framework development for enterprise AI transformation and advanced analytics use cases.

EY Consulting — **Seoul, South Korea**
Senior AI Consultant — *Jan 2022 - Apr 2025*

- Led AI and digital transformation initiatives by identifying enterprise AI use cases, prioritizing quick-win opportunities, and defining implementation roadmaps across multiple industries.
- Delivered AI/ML and analytics projects including market intelligence platforms, semantic search engines, statistical/cohort analysis, and machine learning forecasting models for chemical and manufacturing clients.

i-Scream Edu Co. Ltd — **Seoul, South Korea**
Data Analyst — *Dec 2018 - Dec 2021*

- Built marketing databases, KPI dashboards, and cohort analysis frameworks to support data-driven business and marketing decisions.
- Applied Marketing Mix Modeling (MMM), response curve analysis, and budget optimization techniques to evaluate marketing effectiveness and investment allocation.

Finotek Co. Ltd — **Seoul, South Korea**
Global Marketing Staff & Software Engineer — *Apr 2017 - Nov 2018*

- Supported digital banking and chatbot demonstration initiatives for financial institutions and enterprise clients in Myanmar and Southeast Asia.
- Contributed to customer service digitization proposals and business development activities, including award-winning fintech solution presentations.

Projects

Internal Project — **Seoul, South Korea**
A&M Internal Project — *Oct 2025 - Present*

- Contributed to AI-focused sales decks, proposals, and business development assets for A&M Korea Digital Team's internal initiatives advancing scalable consulting and operational efficiency.
- Developed an AI-enabled Market Intelligence platform integrating macroeconomic, trade, and supply-chain signals via end-to-end data science - EDA, feature engineering, predictive modeling, and automated insight generation.
- Designed and developed an end-to-end AI Agent platform for proposal and Day 1 Pack generation to enhance consulting and business development operations.

Dong Woo Fine-Chem — **Pyeongtaek, South Korea**
AI Transformation (AX) Strategy Project — *Jan 2025 - Mar 2025*

- Identified and curated a comprehensive longlist of AI use cases applicable across the entire organization, along with key business unit-specific (three major divisions) AI initiative.
- Evaluated and prioritized AI initiatives to identify 3-5 high-impact quick-win projects, developing detailed implementation strategies to ensure efficient execution.
- Defined a structured AI implementation roadmap, outlining key milestones, priorities, and execution plans to drive organization-wide AI adoption and value realization.

Yanolja — **Seoul, South Korea**
Group Security Framework Project — *Aug 2024 - Dec 2024*

- Established a comprehensive global security framework for Yanolja Group across domestic and international member companies to prepare for ISO 27001 and ISO 27701 certification audit.
- Performed group pre-assessments after conducting interviews and reviewing related documentations.
- Designed security support processes for member companies.

LG Electronics **Seoul, South Korea**
AI Advisor Project *May 2024 - Jul 2024*
- Developed solutions to address domain problems based on AI Contents within the AI Learning Organizer (ALO) framework.
- Provided training guides and enhancing solutions to solve problems using AI Solutions.
- Set up the development environment for ALO with Tabular Classification/Regression(TCR) and Computer Vision Contents in the analysis environment.
- Conducted model experiments to secure performance and customizing to fit the domain.

LG Chem **Seoul, South Korea**
Citizen Data Scientist Platform Project *Feb 2024 - Apr 2024*
- Developed comprehensive course materials and training resources for the Citizen Data Scientist platform.
- Produced engaging online video tutorials demonstrating CDS platform practical exercises.
- Constructed and assessed quiz and final exam questions for the CDS program.

Samsung **Seoul, South Korea**
GMO Customer Retention Project *Nov 2023*
- Crafted strategies to enhance the Samsung Rewards Program and My Page, aiming to improve the customer experience journey.
- Developed a detailed strategy for implementing the 'Rewards Gifting' service, already in operation at Samsung Korea, in the United Kingdom and France.

DL Chemical **Seoul, South Korea**
DLC AI Project *Aug 2023 - Sep 2023*
- Conducted interviews to identify practical use cases to evaluate feasibility and priorities.
- Explored potential use cases, pinpointed viable options, and created executable plans for immediate implementation.

Internal Project **Seoul, South Korea**
Generative AI PoC *Apr 2023 - Jul 2023*
- Created vector embeddings using GPT-3.5 Turbo model with text-embedding-ada-002 after preprocessing patent data on Azure OpenAI.
- Developed search engines using semantic search to increase productivity by providing relevant context and meaning of words.
- Summarized the benefits and the limitations of using search engines in conservative industries.

Samsung **Seoul, South Korea**
Digital Listening Project, MX Division *Mar 2023 - Apr 2023*
- Provided insightful analyses on consumer demand and points of interest among the younger generations, specifically focusing on topics like Photo, Game, and Wellness.
- Delivered strategic insights and recommendations on how Samsung MX Division can effectively leverage and capture these consumer demands to enhance market penetration and customer engagement.
- Developed marketing database and preforming statistical analysis within five different segments using Tweets, Facebook and Instagram posts for Samsung Galaxy and iPhone.

LG Chem **Seoul, South Korea**
AI Price Prediction Project *Jan 2022 - Dec 2022*
- Built an end-to-end machine learning pipeline from data preprocessing to variable selection for raw material price prediction, i.e. Naphtha and Crack.
- Assisted in developing machine learning and deep learning forecasting models and testing with different types of target values.
- Designed a dashboard to support decision-making in the processes of purchasing raw materials.

PUBLICATIONS

C=CONFERENCE

[C.1] Wonsung Lee, Jaeyoon Chun, Youngmin Lee, Kyoungsoo Park, Sungrae Park (2022). **Contrastive Learning for Knowledge Tracing**. In *The ACM Web Conference*, ACM. 25 April 2022, Virtual Event, Lyon, France. DOI: 10.1145/3485447.3512105
- Developed CL4KT, a Transformer-based contrastive learning framework for knowledge tracing using novel data augmentation techniques for sparse student interaction data.
- Achieved superior predictive performance over existing state-of-the-art approaches across six benchmark datasets through improved knowledge representation learning.

SKILLS

- **AI Strategy & Implementation:** Contributed to AI adoption, security compliance, and business transformation
- **AI & Data Analytics:** Developed AI models for market prediction, security, and business optimization
- **Digital Transformation:** Supported AI model development for market prediction and worked on security and business optimization initiatives
